

## LSB

### Schleifbold® LSB

The flap sanding brush Schleifbold® LSB enables elastic sanding of wood or metal. Slotted abrasive cloth flaps and fiber brush flaps are arranged alternately. As a result, each abrasive cloth strip (approx. 4 mm wide) is elastically supported by the fiber brush flap during the sanding process and thus adapts to profiles of different thicknesses.

Abrasive brush as described above, for surface treatment of wood or metal surfaces or profiles, consisting of metal body, brush holders, brush and abrasive cloth flaps ("charges")

Prices for Schleifbold® LSB without abrasive flap loads.
